CELL BIOLOGY	Standards Assessed	%
	10 items	17%
CALIFORNIA CONTENT STANDARDS: Grade 7		
1. All living organisms are composed of cells, from just one to many trillions,		-
whose details usually are visible only through a microscope. As a basis for		
understanding this concept:		
c. <i>Students know</i> the nucleus is the repository for genetic information in plant and animal cells.	✓	
d. <i>Students know</i> that mitochondria liberate energy for the work that cells do and that chloroplasts capture sunlight energy for photosynthesis.	✓	
e. <i>Students know</i> cells divide to increase their numbers through a process of mitosis, which results in two daughter cells with identical sets of chromosomes.	✓	
CALIFORNIA CONTENT STANDARDS: Grade 8		
6. Principles of chemistry underlie the functioning of biological systems. As a		
basis for understanding this concept:		-
b. Students know that living organisms are made of molecules consisting largely	1	
of carbon, hydrogen, nitrogen, oxygen, phosphorus, and sulfur.	•	
c. Students know that living organisms have many different kinds of molecules,		
including small ones, such as water and salt, and very large ones, such as	✓	
carbohydrates, fats, proteins, and DNA.		
CALIFORNIA CONTENT STANDARDS: Biology		
1. The fundamental life processes of plants and animals depend on a variety		
of chemical reactions that occur in specialized areas of the organism's cells.		
As a basis for understanding this concept:		
a. Students know cells are enclosed within semipermeable membranes that	✓	
regulate their interaction with their surroundings.	·	
c. <i>Students know</i> how prokaryotic cells, eukaryotic cells (including those from plants and animals), and viruses differ in complexity and general structure.	✓	
f. <i>Students know</i> usable energy is captured from sunlight by chloroplasts and is stored through the synthesis of sugar from carbon dioxide.	✓	

GENETICS	Standards Assessed	%
	12 items	20%
CALIFORNIA CONTENT STANDARDS: Grade 7		
2. A typical cell of any organism contains genetic instructions that specify its		
traits. Those traits may be modified by environmental influences. As a basis		
for understanding this concept:		
a. Students know the differences between the life cycles and reproduction methods	✓	
of sexual and asexual organisms.	·	
c. Students know an inherited trait can be determined by one or more genes.	✓	
d. Students know plant and animal cells contain many thousands of different genes		
and typically have two copies of every gene. The two copies (or alleles) of the	✓	
gene may or may not be identical, and one may be dominant in determining the	·	
phenotype while the other is recessive.		
e. Students know DNA (deoxyribonucleic acid) is the genetic material of living	✓	
organisms and is located in the chromosomes of each cell.	•	
CALIFORNIA CONTENT STANDARDS: Biology		
2. Mutation and sexual reproduction lead to genetic variation in a		
population. As a basis for understanding this concept:		
b. Students know only certain cells in a multicellular organism undergo meiosis.	✓	
d. Students know new combinations of alleles may be generated in a zygote	✓	
through the fusion of male and female gametes (fertilization).	•	
e. Students know why approximately half of an individual's DNA sequence	✓	
comes from each parent.	•	
f. Students know the role of chromosomes in determining an individual's sex.	✓	
3. A multicellular organism develops from a single zygote, and its phenotype		
depends on its genotype, which is established at fertilization. As a basis for		
understanding this concept:		
a. Students know how to predict the probable outcome of phenotypes in a genetic		
cross from the genotypes of the parents and mode of inheritance (autosomal or X-	\checkmark	
linked, dominant or recessive).		
5. The genetic composition of cells can be altered by incorporation of		
exogenous DNA into the cells. As a basis for understanding this concept:		
a. Students know the general structures and functions of DNA, RNA, and protein.	✓	

PHYSIOLOGY	Standards Assessed	%
	10 items	17%
CALIFORNIA CONTENT STANDARDS: Grade 7		
5. The anatomy and physiology of plants and animals illustrate the		
complementary nature of structure and function. As a basis for		
understanding this concept:		
a. Students know plants and animals have levels of organization for structure and	✓	
function, including cells, tissues, organs, organ systems, and the whole organism.	▼ 	
c. Students know how bones and muscles work together to provide a structural	✓	
framework for movement.	•	
6. Physical principles underlie biological structures and functions. As a basis		
for understanding this concept:		
j. Students know that contractions of the heart generate blood pressure and that	✓	
heart valves prevent backflow of blood in the circulatory system.	•	
CALIFORNIA CONTENT STANDARDS: Biology		
9. As a result of the coordinated structures and functions of organ systems,		
the internal environment of the human body remains relatively stable		
(homeostatic) despite changes in the outside environment. As a basis for		
understanding this concept:		
a. Students know how the complementary activity of major body systems provides		
cells with oxygen and nutrients and removes toxic waste products such as carbon	✓	
dioxide.		
b. Students know how the nervous system mediates communication between	✓	
different parts of the body and the body's interactions with the environment.		
10. Organisms have a variety of mechanisms to combat disease. As a basis for		
understanding the human immune response:		_
b. <i>Students know</i> the role of antibodies in the body's response to infection.	✓	
c. Students know how vaccination protects an individual from infectious diseases.	✓	
d. Students know there are important differences between bacteria and viruses		
with respect to their requirements for growth and replication, the body's primary	✓	
defenses against bacterial and viral infections, and effective treatments of these	•	
infections.		

ECOLOGY	Standards Assessed	%
	11 items	18%
CALIFORNIA CONTENT STANDARDS: Grade 6		
5. Organisms in ecosystems exchange energy and nutrients among themselves		
and with the environment. As a basis for understanding this concept:		
b. <i>Students know</i> matter is transferred over time from one organism to others in the food web and between organisms and the physical environment.	✓	
c. <i>Students know</i> populations of organisms can be categorized by the functions		
they serve in an ecosystem.	✓	
e. Students know the number and types of organisms an ecosystem can support		
depends on the resources available and on abiotic factors, such as quantities of	✓	
light and water, a range of temperatures, and soil composition.		
CALIFORNIA CONTENT STANDARDS: Biology		
6. Stability in an ecosystem is a balance between competing effects. As a		
basis for understanding this concept:		
a. Students know biodiversity is the sum total of different kinds of organisms and	✓	
is affected by alterations of habitats.	, 	
b. Students know how to analyze changes in an ecosystem resulting from changes	,	
in climate, human activity, introduction of nonnative species, or changes in	✓	
population size.		
c. Students know how fluctuations in population size in an ecosystem are	✓	
determined by the relative rates of birth, immigration, emigration, and death.		
d. <i>Students know</i> how water, carbon, and nitrogen cycle between abiotic resources	✓	
and organic matter in the ecosystem and how oxygen cycles through		
photosynthesis and respiration.		_
e. <i>Students know</i> a vital part of an ecosystem is the stability of its producers and decomposers.	✓	
f. <i>Students know</i> at each link in a food web some energy is stored in newly made		
structures but much energy is dissipated into the environment as heat. This	✓	
dissipation may be represented in an energy pyramid.		

EVOLUTION	Standards Assessed	%
	11 items	18%
CALIFORNIA CONTENT STANDARDS: Grade 7		
3. Biological evolution accounts for the diversity of species developed through		
gradual processes over many generations. As a basis for understanding this concept:		
a. <i>Students know</i> both genetic variation and environmental factors are causes of evolution and diversity of organisms.	✓	
b. <i>Students know</i> the reasoning used by Charles Darwin in reaching his conclusion that natural selection is the mechanism of evolution.	✓	
c. <i>Students know</i> how independent lines of evidence from geology, fossils, and comparative anatomy provide the bases for the theory of evolution.	✓	
CALIFORNIA CONTENT STANDARDS: Biology		
7. The frequency of an allele in a gene pool of a population depends on many		
factors and may be stable or unstable over time. As a basis for understanding		
this concept:		
a. Students know why natural selection acts on the phenotype rather than the	✓	
genotype of an organism.		
b. <i>Students know</i> why alleles that are lethal in a homozygous individual may be carried in a heterozygote and thus maintained in a gene pool.	✓	
c. Students know new mutations are constantly being generated in a gene pool.	✓	
d. <i>Students know</i> variation within a species increases the likelihood that at least some members of a species will survive under changed environmental conditions.	✓	
8. Evolution is the result of genetic changes that occur in constantly changing		
environments. As a basis for understanding this concept:		
a. Students know how natural selection determines the differential survival of	✓	
groups of organisms.		
b. <i>Students know</i> a great diversity of species increases the chance that at least some organisms survive major changes in the environment.	✓	
e. <i>Students know</i> how to analyze fossil evidence with regard to biological diversity, episodic speciation, and mass extinction.	✓	

INVESTIGATION AND EXPERIMENTATION	Standards Assessed	%
	6 items	10%
CALIFORNIA CONTENT STANDARDS: Grade 6		
7. Scientific progress is made by asking meaningful questions and conducting		
careful investigations. As a basis for understanding this concept and		
addressing the content in the other three strands, students should develop		
their own questions and perform investigations. Students will:		
c. Construct appropriate graphs from data and develop qualitative statements about		
the relationships between variables.		
e. Recognize whether evidence is consistent with a proposed explanation.		
CALIFORNIA CONTENT STANDARDS: Grade 7		
7. Scientific progress is made by asking meaningful questions and conducting		
careful investigations. As a basis for understanding this concept and		
addressing the content in the other three strands, students should develop		
their own questions and perform investigations. Students will:		
c. Communicate the logical connection among hypotheses, science concepts, tests		
conducted, data collected, and conclusions drawn from the scientific evidence.		
CALIFORNIA CONTENT STANDARDS: Grade 8		
9. Scientific progress is made by asking meaningful questions and		
conducting careful investigations. As a basis for understanding this concept		
and addressing the content in other three strands, students should develop		
their own questions and perform investigations. Students will:		
b. Evaluate the accuracy and reproducibility of data.		
c. Distinguish between variable and controlled parameters in a test.		
CALIFORNIA CONTENT STANDARDS: Grades 9-12		
1. Scientific progress is made by asking meaningful questions and conducting		
careful investigations. As a basis for understanding this concept and		
addressing the content in the other four strands, students should develop their		
own questions and perform investigations. Students will:		
c. Identify possible reasons for inconsistent results, such as sources of error or		
uncontrolled conditions.		
f. Distinguish between hypothesis and theory as scientific terms.		
i. Analyze the locations, sequences, or time intervals that are characteristic of		
natural phenomena (e.g., relative ages of rocks, locations of planets over time, and		
succession of species in an ecosystem).		
j. Recognize the issues of statistical variability and the need for controlled tests.
